Section 1: Coding

1. Problem Statement

Ravi is given an array of integers and is tasked with sorting it uniquely. He needs to sort the elements in such a way that the elements at odd positions are in descending order, and the elements at even positions are in ascending order.

Your task is to help Ravi create a program that uses insertion sort to sort the array as per the specified conditions and then print the sorted array. Position starts from 1.

Example

Input:

Size of the array = 10

Array elements = 25 36 96 58 74 14 35 15 75 95

Output:

Resultant array = 96 14 75 15 74 36 35 58 25 95

Explanation:

Initial Array: 25 36 96 58 74 14 35 15 75 95

Elements at odd positions (1, 3, 5, 7, 9): 25 96 74 35 75

Elements at odd positions sorted descending order: 96 75 74 35 25

Elements at even positions (2, 4, 6, 8, 10): 36 58 14 15 95

Elements at even positions sorted ascending order: 14 15 36 58 95

So, the final array is 96 14 75 15 74 36 35 58 25 95.

Input Format

The first line contains an integer N, representing the number of elements in the array.

The second line contains N space-separated integers, representing the elements of the array.

Output Format

The output displays integers, representing the sorted array elements separated by a space.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4 3 1 4 2

Output: 4 1 3 2

Answer

You are using GCC

```
#include <stdio.h>
     void insertionSort(int arr[], int n, int isAscending) {
        for (int i = 1; i < n; i++) {
          int key = arr[i];
          int j = i - 1;
          while (j >= 0 && ((isAscending && arr[j] > key) || (!isAscending && arr[j] <
     key))) {
             arr[j + 1] = arr[j];
arr[j + 1] = key;
             i = i - 1;
     int main() {
        int N;
        scanf("%d", &N);
        int arr[N];
        for (int i = 0; i < N; i++) {
          scanf("%d", &arr[i]);
        }
        int oddArr[(N + 1) / 2], evenArr[N / 2];
        int oddCount = 0, evenCount = 0;
        for (int i = 0; i < N; i++) {
          if (i % 2 == 0) {
             oddArr[oddCount++] = arr[i];
          } else {
             evenArr[evenCount++] = arr[i];
        }
        insertionSort(oddArr, oddCount, 0);
        insertionSort(evenArr, evenCount, 1);
```

```
oddCount = 0;
evenCount = 0;
for (int i = 0; i < N; i++) {
    if (i % 2 == 0) {
        arr[i] = oddArr[oddCount++];
    } else {
        arr[i] = evenArr[evenCount++];
    }
}

for (int i = 0; i < N; i++) {
    printf("%d ", arr[i]);
    }
    printf("\n");
```

Status: Correct Marks: 10/10

2. Problem Statement

Reshma is passionate about sorting algorithms and has recently learned about the merge sort algorithm. She wants to implement a program that utilizes the merge sort algorithm to sort an array of integers, both positive and negative, in ascending order.

Help her in implementing the program.

Input Format

The first line of input consists of an integer N, representing the number of elements in the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

Output Format

The output prints N space-separated integers, representing the array elements sorted in ascending order.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 9
    5-30127-8216
    Output: -8 -3 0 1 2 5 6 7 12
    Answer
   // You are using GCC
#include <stdio.h>
    void merge(int arr[], int left, int mid, int right) {
      int n1 = mid - left + 1;
      int n2 = right - mid;
      int L[n1], R[n2];
      for (int i = 0; i < n1; i++)
         L[i] = arr[left + i];
      for (int j = 0; j < n2; j++)
         R[i] = arr[mid + 1 + i];
     int i = 0, j = 0, k = left;
      while (i < n1 && j < n2) {
         if (L[i] <= R[j]) {
            arr[k] = L[i];
            j++:
         } else {
            arr[k] = R[j];
            j++;
         k++;
       while (i < n1) {
         arr[k] = L[i];
         j++;
```

```
24070788++;
                             240101089
        while (j < n2) {
          arr[k] = R[j];
          j++;
          k++;
        }
     }
     void mergeSort(int arr[], int left, int right) {
        if (left < right) {</pre>
          int mid = left + (right - left) / 2;
         mergeSort(arr, left, mid);
          mergeSort(arr, mid + 1, right);
          merge(arr, left, mid, right);
     }
     int main() {
        int N;
        scanf("%d", &N);
        int arr[N];
        for (int i = 0; i < N; i++) {
          scanf("%d", &arr[i]);
        mergeSort(arr, 0, N - 1);
        for (int i = 0; i < N; i++) {
          printf("%d ", arr[i]);
        }
        printf("\n");
        return 0;
     }
     Status: Correct
                                                                               Marks: 10/10
 3. Problem Statement
```

Ravi is given an array of integers and is tasked with sorting it in a unique way. He needs to sort the elements in such a way that the elements at odd positions are in descending order, and the elements at even positions are in ascending order. Ravi decided to use the Insertion Sort algorithm for this task.

Your task is to help ravi, to create even_odd_insertion_sort function to sort the array as per the specified conditions and then print the sorted array.

Example

Input:

10

25 36 96 58 74 14 35 15 75 95

Output:

96 14 75 15 74 36 35 58 25 95

Input Format

The first line of input consists of a single integer, N, which represents the size of the array.

The second line contains N space-separated integers, representing the elements of the array.

Output Format

The output displays the sorted array using the even-odd insertion sort algorithm and prints the sorted array.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4 3 1 4 2

Output: 4 1 3 2

```
Answer
You are using GCC
#include <stdio.h>
void insertionSort(int arr[], int n, int ascending) {
  for (int i = 1; i < n; i++) {
     int key = arr[i];
     int i = i - 1;
     while (i \ge 0 \&\& ((ascending \&\& arr[i] > key) || (!ascending \&\& arr[i] < key))) {
       arr[i + 1] = arr[i];
       j--;
     arr[j + 1] = key;
void even_odd_insertion_sort(int arr[], int n) {
  int odd[10], even[10];
  int oddCount = 0, evenCount = 0;
  for (int i = 0; i < n; i++) {
     if (i % 2 == 0) {
       odd[oddCount++] = arr[i];
     } else {
       even[evenCount++] = arr[i];
  insertionSort(odd, oddCount, 0); // Descending for odd positions (0-indexed
even)
  insertionSort(even, evenCount, 1); // Ascending for even positions (0-indexed
odd)
  int oddIndex = 0, evenIndex = 0;
  for (int i = 0; i < n; i++) {
     if (i % 2 == 0) {
       printf("%d ", odd[oddIndex++]);
     } else {
     printf("%d ", even[evenIndex++]);
  printf("\n");
```

```
int main() {
    int n;
    scanf("%d", &n);
    int arr[10];

for (int i = 0; i < n; i++) {
     scanf("%d", &arr[i]);
    }

    even_odd_insertion_sort(arr, n);
    return 0;
}

Status: Correct

Marks: 10/10</pre>
```
